DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsuoka (U.S. Patent 5,640,033) in view of Satoh et al. (U.S. Patent 5,375,069).

Matsuoka teaches in (col. 5, lines 34-49 and FIG. 4) a method of manufacturing a semiconductor device for forming a first wiring layer 51 and a second wiring layer 57 at the same time wherein the first wiring layer being connected to a gate electrode 53 on a gate insulating film formed on a semiconductor region, and the second wiring layer being connected to the semiconductor region 54a, and wherein in patterning the first and second wiring layers, a third wiring layer 59 electrically separated from and placed between the first and second wiring layers is left unetched.

Matsuoka fails to explicitly disclose wherein the spaces among the third, first, and second wiring layers are set generally equal to a minimum pattern space of third, first, and second wiring layers as recited in present claim 1.

Satoh teaches that the spaces (23, 24, 25) among the third 16, first 14, and second 15 wiring layers are set generally equal to a minimum pattern space of the third, first, and second wiring layers (See col. 6, lines 49-61 and FIG. 2B). It would have been obvious to one of ordinary skill in the art of making semiconductor devices to incorporate Satoh's

teaching into Matsuoka's method because in doing so the improvements in the wiring route search processing speed can be accomplished (See col. 2, lines 62-63).
